

LAMA WS25/26 - Environment Setup

Windows

Setup

1. Download and install miniconda: <https://docs.conda.io/projects/miniconda/en/latest/>
2. Start Anaconda Prompt (miniconda3)
3. Create environment with packages `conda env create -f lama_env.yaml`
4. Load environment ``conda activate lama25-env``
5. Install LAMA Library `pip install git+https://github.com/itiv-kit/lama-python-lib`
6. Install IPython Kernel `python -m ipykernel install --user --name==lama25-env`
7. That's it

Run

1. Start miniconda Anaconda Prompt (miniconda3)
 2. Load the environment: ``conda activate lama25-env``
 3. Start Jupyter Notebook or Lab: `jupyter notebook` or `jupyter lab`
 4. Please note that the kernel on your computer is called something like "Python 3"
-

Linux / Mac

Setup

1. Install Python 3.11 (currently supported by us. However other versions should work as well)
 1. On Mac the easiest way is [Homebrew](#)
 2. On Linux you may simply use your OS' package manager
2. Open a Terminal
3. Create a virtual environment
 1. First navigate to a folder where you want to place your environment
 2. Create it: `python3.12 -m venv lama25-env`
4. Activate the environment: `source lama25-env/bin/activate`
5. Install all needed packages: `pip install -r requirements.txt`
6. Install the LAMA Library: `pip install git+https://github.com/itiv-kit/lama-python-lib`
7. Install IPython Kernel `python -m ipykernel install --user --name==lama25-env`
8. That's it

Run

1. Activate the environment: `source PATH_TO_ENVIRONMENT/bin/activate`
2. Start Jupyter Notebook or Lab: `jupyter notebook` or `jupyter lab`
3. Please note that the kernel on your computer is called something like "Python 3"
